# TOKYO JUKI

*Tokyo Juki meets the needs of modern society with an extensive lineup of high-performance heavy machinery designed to meet the demands of our new times, and also with training of expert technical staff.*

## GREETING

Tokyo Juki is deeply grateful for all the guidance and encouragement we have received from everyone, beginning from the time of our founding in 1963 and continuing to the present day. With the recent dramatic changes in the economic environment and the current trends in technical innovation, common business practices now include the rationalization of business management, efficient management of assets, and use of leases. In the construction industry as well, the larger scales of construction projects and rising personnel costs have led to an increasing reliance on machinery, and growing numbers of companies are obtaining this equipment through leasing.

Tokyo Juki is a leasing company that specializes in heavy construction machinery. We are steadily adding to our lineup of large-size high-performance machines to meet all kinds of customer needs, expanding our training of operators who are expert in the technologies and thoroughly grounded in safe operations, and also further improving our machine management. We have established an even more advanced safety management system, and are dedicated to always operating under the "safety first" motto.

In the future we will continue to work for greater rationalization in all parts of our business, and devote our full strength to meeting the demands of the new times. We hope for your continued support in the future.

Tokyo Juki Co., Ltd.  
President Taku Tsuruoka
